Backlog ID	Epic	Module / Page	User Story	Story Description	User Role	Remarks
HC-001	Account Management	Admin Login	As an admin, I want to sign in, so that I can access the application.	The admin login screen should provide input fields for email and password. The password must be between 8 and 15 characters in length and should include a combination of alphanumeric and special characters. When the admin clicks the Sign In button, the system should validate the entered credentials. If the credentials are valid, the admin should be redirected to the Admin Dashboard page otherwise, an appropriate error message should be displayed. **The system must use JWT token–based authentication and store user passwords as salted hashes.**	Admin	UserName and Password are required fields. Also check for valid email format. And as mentioned check for password validation also For passowrd, there should be eye icon, on click show/hide password and default textbox type is password
HC-002	Account Management	Admin Login	As an admin, if I forget my password, I want to reset it so that I can access my account again.	When the admin clicks the Forgot Password link on the login page, they should be redirected to the Forgot Password page where they are prompted to enter their registered email ID. After submitting the email, the system should send a password reset link to the admin's email address. When the admin clicks the reset link, a reset password page should open with the email field displayed as disabled. The admin should be required to enter a New Password and Confirm Password. Upon successful submission of the new password, the admin should be redirected to the login page, and a success message should be displayed indicating that the password has been reset successfully. **Link should be expired in some specific timeline. Ex:- 10 min** **and after that timeline it should not be accessible.**	Admin	Email is required field and check for valid email format and registered in system or not. If not, show appropriate message. If everything is valid then redirect to reset password page. password and confirm password are required field and both must be same
HC-003	Service Management	Master Data	As an admin, I want to view and manage service types so that I can organize services within the system.	The admin should be able to view the Service Types on the listing page. The listing page should display two columns: Name(Image + Name) and Action. The Action column should contain Manage, Edit, and Delete icons for each service type. The page should also include an Add button to create a new service type. When the admin clicks the Add button or Edit icon, a popup should open displaying a Image uploader and Service Type textbox. Admin should be able to enter or modify the service type name, image and click Save to add or update the service type. When the admin clicks the Delete icon, a confirmation popup should be displayed with the message: "Are you sure you want to delete {Service Type Name}?" If confirms the action, the selected service type should be deleted from the system. If cancels the action, no changes should be made.	Admin	Service Type Name is required field. Make sure max length validation should be there as per database length. Service Type name will be unique in database. If admin tries to enter duplicate name then proper message should be displayed Make sure to define supported file types and file size limit. Here admin can only uploads images. Image upload is not mandatory. If a service type does not have an image, dispaly a default (general) image on the listing page.

HC-004	Service Management	Master Data	As an admin, I want to manage categories and subcategories within a service type.	When the admin clicks the Manage icon for a service type from the Service Types listing page, the system should open a popup. The popup should display two sections side by side and having header "{Selected Service Type} Service": 1. Category 2. Sub Category The Category section should list all categories associated with the selected service type along with a Delete icon and an Add button. The admin should be able to add a new category by clicking the Add button and entering the category name. The Sub Category section should display subcategories corresponding to the selected category. The admin should be able to add subcategories inside a selected category by clicking the Add button and entering the subcategory name. When the admin clicks the Delete icon for a category or subcategory, a confirmation prompt should be displayed. If the admin confirms the action, the selected category or subcategory should be removed from the system. In both sections there will be Add & Delete button, Popup for Add and delete confirmation.	Admin	Category and SubCategory Name is required field. Make sure max length validation should be there as per database length If the admin attempts to add duplicate category or subcategory names, the system should display an appropriate validation message.
HC-005	Service Management	Service Management- Listing Services	As an admin, I want to view services under service types and categories. So that I can configure pricing, availability, and service details.	The system should display a list of all available Service Types with in an expandable format. When the admin expands a service type, the system should display all associated Categories as selectable tabs or cards. Each category should show the total number of services available under it. When the admin selects a category, the system should display a list of services associated with it. The service listing should display Service ID, Service Name, Sub Category, Price, Commission, Availability and Action The Availability column should allow the admin to enable or disable a service using a toggle switch. When the availability status is changed, confirmation box should be opened and update the service status accordingly. The admin should able to add a new service by clicking the Add button. The Action column should provide edit and delete. There will be Filter button also. When the admin clicks the Filter button, the system should open a Filter panel. The filter panel should provide the following filter options: 1. Sub Category (dropdown) 2. Price (range slider with minimum and maximum values) 3. Availability (dropdown - Yes & No) 4. Commission (input field) The admin should be able to select one or more filter criteria to see filtered service list. If no services are available for a selected category, the system should display an appropriate empty-state message.	Admin	Service Types, Categories, Sub categories added by admin in master data page. Price must be displayed with currency symbol Commission should be displayed with percentage If Image is missing for any Service Type, then dispaly a default (general) image (Same image as master data default one)
HC-006	Service Management	Service Management- Manage Master Data	As an admin, I want to manage Service Type, Category and Subcategories from Service page also.	In Service Management page, there should be one Add button also in line with page header. On click of Add button popup will be opened having Service Type field. On click of save Service Type will be added in system. For each service type there will be one add icon to add category and subcategory for that specific service type. On click of that one popup will be opened having two sections. Same as mentioned in **HC-004**.	Admin	Same as described in HC-004.

HC-007	Service Management	Service Management- Manage Services	As an admin, I want to manage services under service types and categories. So that I can configure pricing, availability, and service details.	In Service Management page, there should be one Add button also in line with page header. On click of Add button popup will be opened having Service Type field. On click of save Service Type will be added in system. For each service type there will be one add icon to add category and subcategory for that specific service type. On click of that one popup will be opened having two sections. Same as mentioned in **HC-004**.	Admin	Name, SubCategory, Price, Commission, Duration is required field. Make sure max length validation should be there as per database length If the admin attempts to add duplicate service name for same subcategory, the system should display an appropriate validation message. SubCategory and Name combine should be unique. In price textbox there should be currency symbol. Duration should be in min. So min must be there in textbox Commission is in percentage so can not enter more than 100 and % symbol should be there in textbox
HC-008	User Management	My Profile	As an Admin, I want to manage my profile details, so that my account information remains accurate and secure.	The system should display the logged-in admin profile information including: Profile Photo, User Name and Role Contact Information (Mobile Number, Email Address and Address) Security section (Password placeholder) On hover of Profile photo, there should be edit icon and on click of that one image upload popup should open. And admin can upload/change profile photo. The system should provide an Edit button in the Contact Information section. Clicking Edit should open a modal titled Edit Contact Information with fields: Mobile Number, Email and Address. On click of save user's contact information will be updated. The system should provide a Change Password button in the Security section. Clicking it should open a modal titled Change Password with fields: Current Password, New Password, Confirm Password. On click of Save admin's password should be changed.	Admin	Make sure to follow validations like fields are required. Email format validation must be there. New Password and Confirm password should be same Current Password should be correct.
HC-009	Discount & Offer Management	Offer	As an Admin, I want to create and manage fixed-percentage discount offers, so that customers can receive discounts on their order total during checkout.	This screen displays a list of offers in a grid format, showing details such as coupon code, coupon description, discount percentage, number of times the coupon has been applied, and the status (Active or Inactive). The grid should support pagination and sorting. A Filter option is available on the screen. When selected, a filter panel opens that allows the admin to filter offers based on discount percentage range and availability status. The admin can apply or cancel the selected filters. An Add button is provided to allow the admin to create a new offer. Clicking this button opens a popup where the admin can enter coupon code, coupon description and discount value. The admin can save or cancel the offer creation. Each record in the grid includes an Action column with options to edit or delete the offer. Selecting the Edit option opens a popup where the admin can update the existing offer details including status, while the Delete option allows the admin to remove the offer from the system.	Admin	In grid, Coupon Discount should be appended with %Off (Ex:- 10% Off) In grid, coupon applied -> Total number of times that specific coupon has beed applied by customer. Ex:- 21 Times, 10k Times etc. Coupon code and discount should be required. At the time of add/edit, in database coupon code should be saved in uppercase. Status field should not be there at the time of add. Because at that time it will be active by default. Make sure max length validation should be there as per database length

HC-010	Home	Home - Top Menu	As a customer, I want header that allows me to navigate the application and access sign-in or profile options.	Home Page, means we can say this is a landing page of our application. When a customer accesses the site, the system should display a top menu header on all pages. The top menu header should display the application logo, which when clicked, should redirect the user to the Home page. The header should include primary navigation menu options such as: **Home, Services, Contact Us.** When a user clicks on any menu option, the system should navigate the user to the corresponding page. The header should display a Sign In button if user is not signed in yet. When the user clicks the Sign In button, the system should redirect the users to the sign-in page. If the user is already logged in, the Sign In button should be replaced with a User Profile menu. The user profile menu should provide options such as: **My Profile, My Bookings, Logout**	Customer	
HC-011	Home	Home - Service Discovery	As a customer, I want to view and explore available services on the home page so that I can easily discover and select services based on my needs.	On home page, display the main content section immediately below the top menu header to help users discover and explore available services. The system should display a banner with a headline and supporting text describing the home services offered. A search bar should be displayed within this section, allowing users to search for services by name. When the user enters a search term, matching services with term will be there in dropdown pattern and once select or initiates the search, the system should redirect on service detail page. The banner should also display key platform highlights such as: Number of customers served, Total services available Below the banner section, the system should display a “What are you looking for?” section showing service type with icons. When a user clicks on a service type, the system should navigate the user to the relevant service type detail page. Only top 6 will be displayed in carousel slider. On click of next arrow other service type will be displayed. Below that Popular Services section showing commonly(highly) booked services. Each service card should display: **Service image, Service name, Price, Add button** When a user selects a service, the system should navigate the user to the service detail page. A See More option should allow users to view additional popular services. The system should display a All Services section listing all services. Each service card should provide basic service details same as popular services. Users should be able to browse and scroll through the available services.	Customer	If Image is missing then display default image for Service Type.
HC-012	Home	Home - Join Us Banner	As a customer, I want to view the “Want to Join Us” section so that I can learn about becoming a service partner and apply to join the platform.	When a user scrolls to the bottom section of the Home Page, the system should display a “Want to Join Us?” banner. The banner should include: A headline encouraging users to become service partners Supporting text describing the benefits of joining the platform A Join Now button A visual illustration representing service professionals When the user clicks the Join Now button, the system should redirect the user to the Service Partner Onboarding page.	Customer	All data is static
HC-013	Home	Home - Footer	As a customer, I want to access the footer so that I can view company information, helpful links, and app download options.	The system should display a footer section at the bottom of all pages. The footer should include the following sections: **Company:-** About Us, Terms & Conditions, Privacy Policy, Careers **For Customers:-** Reviews, Categories, Blogs, Contact Us **For Professionals:-** Become a Service Partner **Download:-** App Store, Google Play Store **Branding & Legal:-** Company logo, Copyright information, Social media icons	Customer	All data is static No redirection will be there on any link click

HC-014	Account Management	Customer SignUp/Login	As a customer, I want to sign up and login just by entering name & email address	When a user visits the login page, the system should display a fields to enter a name and email address. The user should be required to enter a valid email address and click the Get OTP button. An email having OTP (random 4 digit) will be sent on user's email address. The user should be redirected to the OTP verification screen where the email should be displayed as read-only. The user should be required to enter the received OTP and submit it for verification. If the OTP is valid, the system should check whether the user is registered in the application. If the user is registered, the system should automatically sign in the user and redirect them to the home page. If the user is not registered, then just by entering name and email address user must be registered first and redirect to the home screen. **User is registered or not should be based on email address entered. If already registered and name is different then we also need to update name.** If the OTP is not received, invalid or expired, the system should display an appropriate error message and allow the user to request a new OTP.	Customer	Name and Email address should be required and valid format. On OTP screen OTP is required. Once OTP is sent OTP will be expire in 10 min After that if user enters OTP then there should be proper message. **For customers, password is not required to login. Just email address and OTP verification is required.**
HC-015	Account Management	Service Partner SignUp	As a Service Partner, I want to register to provide services to customer	On Login page, there will be text saying "Are you a service partner? Join Now" and On home page also there is a button "Join Now" On click of Join Now, service partner will be redirected to Service Partner Onboarding page. The onboarding page should display a form requiring the service partner to provide complete personal, educational, professional, and service-related information in order to submit an application. The service partner should be required to enter the following personal details: Profile image (upload option), Full name, Date of birth, Gender, Mobile number, Email address, Applying for (service Type dropdown), Permanent address, Residential address The Educational Information section should allow the service partner to enter education details such as: School/College name, Passing year, Marks or percentage The service partner should be able to add multiple education entries by clicking the Add (+) button. Each added entry should be removable if required. The Professional Information section should allow the service partner to enter work experience details including: Company name, Role, From date, To date The service partner should be able to add multiple professional experience entries using the Add (+) button. Each experience entry should be independently editable or removable. The Skills & Expertise section should allow the service partner to select multiple	Service Partner	Below fields are mandatory. 1. Full Name 2. Date of Birth 3. Gender 4. Mobile Number 5. Email (Valid format) 6. Applying For **(Service Type dropdown)** 7. Minimum 1 educational info 8. Minimum 1 skills and expertise **(Categories)** 9. Minimum 1 service offered **(Sub Categories)** 10. Minimum 1 language 11. Minimum 1 document Gender dropdown values: **Male, Female** Proficiency dropdown values: **Beginner, Intermediate, Expert** Language Dropdown: **Static data comes from Enum** On success page, there will be 2 buttons as described. Those buttons are just for view purpose only.

				The Services Offered section should allow the service partner to select one or more services they are willing to provide from the available service list. Service list means Sub Ctaegory based on selected Categories The Languages section should allow the service partner to select: Language, Proficiency level The service partner should be able to add multiple language entries using the Add (+) button. The Attachments section should allow the service partner to upload documents such as: Resume, Experience certificates, Professional licenses The system should support drag-and-drop and manual file selection with defined file size and format limits. When the service partner clicks the Apply button, the system should validate all mandatory fields and uploaded documents. If validation is successful, the system should submit the application and redirect to success page. **By default the status will be Inactive.** It will be activated once service partner application is accepted by admin. In success page there is message of Thank you and two buttons. View Services & Go To Home. On click of both button nothing will happen. If validation fails, the system should display appropriate error messages. When the service partner clicks the Cancel button, the system should discard all entered information and return the user to the previous page.		
HC-016	User Management	My Profile	As a customer, I want to manage my profile details and payment methods so that I can securely update my information and choose a convenient way to pay.	When a customer navigates to the My Profile page, the system should display the customer's personal details and saved addresses. The system should allow the customer to: Change Mobile Number and Email Address View saved addresses Add a new address & Edit or delete existing addresses Each address should include: Address label (e.g., Home, Office) Full address details Location on map (if applicable) **First time when customer comes, there will be no mobile number. At that time there should be Add botton instead of change.** At the time of adding address, all fields should be required.	Customer	On click of change Mobile Number, one popup having existing phone number will open. On click of change email address, one popup having existing email open, if user changes email and hit save then verify OTP popup should open and OTP sent on new email address. If OTP is valid then and then email will be changed. Mobile Number, Email Address is required field. Email format should be proper. OTP should be valid for 10 min.
HC-017	Service Discovery	Services	As a customer, I want to view all available service categories so that I can easily choose and explore the services I need.	A Services banner section at the top of the page The banner will include: service-related images and A title labeled "Services" centered displayed. The system will display a grid-based list of service type cards. Each service type card will include: Service Type Name (e.g., Women's Salon & Spa, Cleaning). Total Bookings Count (e.g., 366k+ bookings). A service type image. When a user clicks on a service type card: The system will redirect the user to the selected service type detail page. The selected type context will be preserved.	Customer	The total bookings count will be displayed as 'XXX Bookings'. For counts greater than or equal to 1,000, the value will be displayed in 'k+' format (e.g., '12k+ Bookings').

HC-018	Service Discovery	Services - Service Type Detail Header Banner	As a user, I want to browse services by category and sub-category so that I can quickly find and book the exact service I need.	Display a header banner for the selected Service Type on top. The header will include: Service Type title (e.g., Cleaning Services). Search input field with placeholder text (e.g., “Search for {Service Type} Services”). Number of services Badges (e.g., Verified Professionals, Superior Stain Removal) Once user hits search then service list should be filtered with search value. The header will remain consistent across all categories of the selected service type.	Customer	Searched term should be matched with service name
HC-019	Service Discovery	Services - Service Type Detail Content	As a customer, I want to browse services by category and sub-category so that I can quickly find and book the exact service I need.	Left-side navigation panel will be displayed. The navigation panel will list: Parent Categories (e.g., Full Home Cleaning, Bathroom & Kitchen Cleaning). Child Sub-Categories nested under each parent category (e.g., Furnished Apartment, Unfurnished Apartment). Parent categories will be: Expandable and collapsible and Highlighted when selected. The selected sub-category will be visually selected(active state). The system will display a list of service cards corresponding to the selected sub-category. Each service card will include: Service name (e.g., Furnished Apartment Cleaning – 1 BHK). Estimated duration (e.g., 60 min) price. Short service description. Service image. “View Details” button. “Add” button to proceed. Only services relevant to the selected sub-category will be displayed. When the customer clicks on “View Details”: The system will open the detailed service information view (new page). Full service scope, inclusions, exclusions, and pricing details shall be displayed. When the user clicks on the “Add” button: Customer will be redirected to checkout page.	Customer	If services are unavailable for a selected sub-category: The system will display a “No services available” message.
HC-020	Service Discovery	Services - Service Detail Content	As a customer, I want to view detailed information about a selected service so that I can understand the scope, pricing, inclusions, and exclusions before booking.	When click on View Details product detail page will display: Service title (e.g., Classic Full Home Cleaning (1 BHK)). Estimated service duration. Primary service image gallery. An “Add” button shall be displayed for checkout. The system will display multiple service images. Below service name, price with currency symbol should be dispalyed. The system will display a Cleaning Includes section. Includes will be shown as a clear bullet-point list. The system will display a Cleaning Excludes section. Exclusions will be shown as a clear bullet-point list. The system will display an Other Services section on the right side. Only 4 related services should be there. **Related services means services having same type of Sub Category**. Each related service card will include: Service name Price Service image Add button will allow customer to checkout A “View All” button will allow users to see more related services.	Customer	The ‘Cleaning Includes’ section shall display each item with a check icon, while the ‘Cleaning Excludes’ section will display each item with a cross icon

HC-021	Checkout	Checkout-User and Address detail	As a customer, I want to review my email address and address summary so that I can confirm the booking.	On the left side of the checkout there will be booking for section and select address section. If User is logged in then in Booking For: Email Address will be displayed If not then there will be button for Log In. On click of that one popup having name and email address field will be opened for sign in and after entering valid email OTP verification is required same as login flow. Below that, there should be address selection part. After login, there will be button "Select Address". On click of that one popup will open having list of saved addresses and also one button on top called "Add Address". When the user clicks on the Add Address button, the system will open a Add Address popup. The popup will display an interactive map view with a location pin. In popup there will be list of saved addresses also. Saved addresses comes from my profile. If in profile page user added any addresses, it will be visible here. User can directly select from list. The map pin will indicate the currently selected location. The user will be able to move or change the location using the map. A Change option will allow the user to update the selected address location. The system will automatically fetch the address details based on the selected pin location. The system will display the selected address in a readable format. The user will be able to enter: House / Flat Number (mandatory), Landmark (optional) The system will allow the user to label the address as: Home, Other If Other is selected, the user will be able to enter a custom label (e.g., Office, Parent's Home).	Customer	Make sure one address is selected and user is logged in the system.
HC-022	Checkout	Checkout-Slot and Payment method detail	As a customer, I want to add my booking slot and payment method so that I can confirm the booking.	Below Addresses there is Slot section where Book Slot button is there. When the user clicks on Book Slot, the system will open a Book Slot popup. The popup will display the heading "When should our expert arrive". The system will display a list of available dates. The user will be able to select one date only. The selected date will be visually highlighted. Unavailable dates will not be selectable. After selecting a date, the system will display available time slots for that date. The user will be required to select one time. Unavailable or fully booked time slots will be disabled. On clicking Save: The system will validate that both date and time are selected. The selected slot will be saved. The selected slot will appear in the Slot section. Below Slot section there is Payment method section where Select Payment Method button is there. When the user clicks on Select Payment Method, the system will open a Select Payment Method popup. The popup will have two payment methods displayed in single radio selection form. **Debit/Credit Card & Cash** The user will be required to select one method. The selected payment method will be saved. The selected method will appear in the Payment method section.	Customer	Date selection is mandatory. Time slot selection is mandatory. Any one payment method selection is must.

HC-023	Checkout	Checkout-Selected service and Payment detail	As a customer, I want to review my selected service and payment summary so that I can confirm the booking.	Payment Summary section will be displayed in right side of the checkout page Selected service with price, Items Total, Taxes, Coupon discount (if applied), Total Amount to Pay All amounts shall be displayed in the selected currency. The system will display a Coupons & Offers section with available offers. (Offers added by Admin) Each coupon card will display: Coupon code & Offer description A View All option will allow users to view all available coupons. The user will be able to apply a coupon by clicking Add. On applying a coupon: The discount amount will be calculated. The coupon code will be displayed in the Payment Summary. The discount will be shown as a negative amount. Only one coupon can be applied at a time.	Customer	Discount amount will not exceed item total. Coupon already used can not be applied again. **Taxes should be comes from configured value.** **Take 5% Tax**
HC-024	Checkout	Checkout-Payment	As a customer, I want to pay so that I can complete my service booking conveniently.	On checkout page, left side below payment method selection there will be one button Pay {Total Amount} with currency symbol. On click of Pay, if payment method Cash is selected then the booking will be confirmed immediately. and payment status will be marked as Pending. If payment method is card, the system will initiate a secure payment gateway flow. The user will be able to enter card details, CVV and other details (Payment gateway will provide secure payment form) Payment will be processed online. On successful payment: Booking will be confirmed and payment status shall be marked as Paid. On payment failure: An error message will be displayed and User will be allowed to retry or change payment method.	Customer	Online payment must be successful to confirm booking when card is selected.
HC-025	Checkout	Checkout-Success	As a customer, I want to view my booking confirmation details after payment so that I know my service is successfully booked and can track it.	After booking (successful payment) success page will be opened. **Booking Status will be Pending.** In that header will be “Your booking is confirmed.” The service category name will be displayed. The system will display booking details including: Service name Service duration Assignment status shall be shown (e.g., Assigning Service Partner). There will be also one button to download invoice. Below that Total amount paid information should be displayed. The system will display the selected service address with selected date and time. In botton there is one button called "My Bookings" -> Redirects the user to the booking page	Customer	
HC-026	Booking Management	My Bookings	As a customer, I want to view and manage my upcoming and completed bookings so that I can track service details, assigned professionals, and payments.	The system will provide two tabs: Upcoming and Completed The selected tab should filter bookings accordingly. Each booking will be displayed as a card format. For each booking, the system will display: Service name, Service duration, Booking date (day and month), Service location (address), Booking amount, Booking status (e.g., Pending, Completed) Below that assigned service partner details: Name, Role (Cleaner / Technician), Profile image will be displayed. If not assigned, appropriate status should be shown. The system will provide a call/contact option for the assigned service partner. The system will provide a Receipt download/view option for each booking.	Customer	Booking Status will be visually distinguishable. Bookings will be clearly displayed as per booking date latest first. Users will only be able to view their own bookings.

HC-027	Contact Us & Support Management	Contact Us	As a customer, I want to contact the company using phone, email, address, or a contact form so that I can easily reach support or send inquiries.	In contact us page, contact details including: Phone number, Email address & Office address will be displayed. The system will provide a Contact Us form with the following fields: First Name, Last Name, Mobile Number, Email, Description / Message The system will allow users to submit the form using a Send Message button. The system shall validate required fields before submission. On successful submission: The system will store the inquiry. The system will show a success confirmation to the user.	Customer	First Name, Last Name, Email & Description should be required. Also check for valid email format
HC-028	User Management	User Management -> Customers	As an admin, I want to manage customers from a centralized list so that I can view, add, block, or delete customer accounts efficiently.	This screen displays a list of customers in a grid format, showing details such as Customer ID, Name, Mobile Number, Email, Pending Bookings, Total Bookings, Status (Active, Blocked), Action. The grid should support pagination and sorting. A Filter option is available on the screen. When selected, a filter panel opens that allows the admin to filter offers based on no. of bookings range and status. The admin can apply or cancel the selected filters. An Add button is provided to allow the admin to create a new customer. Clicking this button opens a popup where the admin can enter Name, Mobile Number and Email Address. The admin can save or cancel the customer creation. Each record in the grid includes an Action column with options to block or delete the customer. Selecting the block or delete option opens a confirmation box saying "Are you sure you want to block/delete cutomer", if proceed and block action is selected then that customer is blocked and can not login again in system, status also changed to blocked. while the Delete option allows the admin to remove the customer from the system.	Admin	
HC-029	User Management	User Management -> Customer detail	As an admin, I want to view a customer's detailed profile so that I can monitor their information, booking history, and take necessary administrative actions.	When the admin clicks on a Customer ID from the Customers List screen, the system should navigate to the Customer Detail Page for the selected customer. The system should display the following customer details at the top of the page: Customer ID, Name, Mobile Number, Email Address, Current Status (Active / Inactive / Blocked) The status should be visually highlighted using appropriate labels or colors. The system should display a Service Bookings grid listing all bookings made by the customer. Grid should have pagination and sorting. The grid should include the following columns: Service ID, Service Name, Service Type, Assigned Expert, Service Address, Date & Time of Service Each booking record should provide an Action Menu allowing the admin to: Change Assigned Expert or Assign Expert, Complete Booking, Cancel Booking, Delete Booking (if applicable) Selecting Change Expert should open a popup showing: Currently assigned expert, List of available experts **(Only Verified means Active experts we can assign)**. The admin can confirm or cancel the reassignment. Selecting Complete Booking should open a confirmation dialog: "Are you sure you want to complete this booking?" Upon confirmation: The booking status should be updated as "Completed" and Payment status also be "Paid". Selecting Cancel Booking should open a confirmation dialog: "Are you sure you want to cancel this booking?" Upon confirmation: The booking status should be updated as "Cancelled". Delete Booking should delete specific booking from system with confirmation A Filter option should be available on the Service Bookings section. When the admin clicks on Filter:	Admin	If booking status is completed then admin can not perform any action. If booking service already started then also admin can not do any type of action. **Once any service partner is assigned then and then admin can change expert. If not assigned then instead of change there will be Assign Expert menu,** In Grid assigned expert column should display Profile Photo and name. Date and Time format should be "27 Aug 2023 1:58 PM" On hover of Exper Name from grid, one small popup (we can say one type of tooltip) will open, in that Expert photo, name, service type, Verified Icon (if verified by admin), View Details button and call icon will be there

HC-030	User Management	User Management -> Admin Users	As an admin, I want to manage admin users from a centralized list so that I can view, add, edit, or delete admin accounts efficiently.	This screen displays a list of admin users in a grid format, showing details such as User ID, Name, Email, Role, Status (Active, Inactive), Action. The grid should support pagination and sorting. A Filter option is available on the screen. When selected, a filter panel opens that allows the admin to filter offers based on Role and Status. The admin can apply or cancel the selected filters. An Add button is provided to allow the admin to create a new user. Clicking this button opens a popup where the admin can enter Name, Mobile Number, Email Address, Role, Password and Confirm Password. The admin can save or cancel the user creation. **On click of save, one email will be sent to added admin's email containing password details. So that newly added Admin can login.** Each record in the grid includes an Action column with options to change password, edit or delete the user. Selecting edit option should open same popup as add user and can change existing details. Selecting the delete option opens a confirmation box saying "Are you sure you want to delete user", if proceed remove the user from the system. Selecting Change password will oprn popup having two textbox, Password and Confirm Password. **Admin can change own password only. Can not change other admin's password.**	Admin	
HC-031	User Management	User Management -> Service Partners	As an admin, I want to manage service partners from a centralized list so that I can assign training, Activate/Inactivate or delete their accounts efficiently.	This screen displays a list of service partnersin a grid format, showing details such as Service Partner ID, Name, Mobile Number, Email, Address, Job(Service Type), No. of Jobs completed and Action. The grid should support pagination and sorting. A Filter option is available on the screen. When selected, a filter panel opens that allows the admin to filter sevice partners based on Job(service type), on no. of Jobs completed range and status. The admin can apply or cancel the selected filters. In action column an Active/Inactive icon is provided to allow the admin to activate/deactivate. On click of that one confirmation box saying "Are you sure you want to activate/deactivate {Name}?" If proceed then status will be changed. In action Delete option allows the admin to remove the service partner from the system. On click of Service Partner ID, admin will be redirected to Service partner detail page.	Admin	

HC-032	User Management	User Management -> Service Partner detail	As an admin, I want to view a service partner's detailed profile so that I can monitor their information, assigned service history, and take necessary administrative actions.	When the admin clicks on a Service Partner ID from the Service Partners List screen, the system should navigate to the Service Partner Detail Page for the selected service partner. At the top with title (Service Partner name) right side there will be Approve and Reject button. On click of Approve, that service partner is verified and activated. On click of reject that service partner will be rejected. The system should display the following service partner details at the top of the page: Service Partner ID, Name, Verification Status (Verified / Unverified), Mobile Number, Email Address, Residential Address, Job Title (Service Type), Total Work Experience (in years), Current Status (Active / Inactive / Suspended) The status should be visually highlighted using appropriate labels or colors (e.g., Green for Active, Red for Inactive). Skills & Capabilities Section: The system should display the following categorized information. Skills - Categories Services Offered - Categories Languages Spoken Each value should be displayed as selectable tags. Previous Job Experience Section The system should display a list of previous job experiences with the following details: Company Name, Job Role, Location, Duration of employment (in years) This section should support horizontal or card-based layout for. Documents Section: The system should display uploaded documents related to If Service Partner is verified then and then Assigned Services section will be displayed. In Assigned Services section grid with pagination and sorting will be displayed. In grid Service Name, Customer Name, Date & Time, Service Address, Service Status (Pending / Completed / Cancelled) will be displayed. When the admin clicks on Filter: A filter panel should open from the side. The panel should allow filtering based on: Date, Time, Service Status Upon applying filters, the grid should refresh and display only matching records.	Admin	

HC-033	Booking Management	Booking Management	As an Admin, I want to view, filter and manage customer bookings, so that I can monitor and control the overall order lifecycle.	The system should display a grid listing customer-wise booking summaries. Grid Columns: Customer Name, Mobile Number, Email Address, Total Booked Services, Address, Total Booking Amount, Payment Method, Action Each row should be expandable to view service-level booking details. When the admin expands a customer row, the system should display a nested grid showing individual services booked by the customer. Service-Level Grid Columns: Service ID, Service Name, Service Type, Date & Time, Assigned Expert, Service Status (Pending / Completed / Cancelled), Action Menu Service status should be visually highlighted using color-coded labels. When the admin clicks on Filter: A side filter panel should open. The panel should allow filtering based on: Service Type, Date, Time, Number of Booked Services (range slider), Booking Amount Range (min–max slider), Payment Method, Booking Status The booking grid should refresh and display only matching records. Pagination and sorting should be there in main grid. In main customer grid, there will be delete icon in action column. On click of delete, one confirmation will open and after proceed that customer will be removed from system. And in booking grid, display actions same as **HC-029.** In that task, we are also having customer wise booking grid. **As soon as the order get placed by customer, admin can be able to see the new order on page without a page refresh. This must be achieved using SignalR**	Admin	In inner grid, in assigned service expert there will be expert photo and name. Main grid data is based on the uniqueness of User and payment method
HC-0034	Payment & Transaction Management	Payment & Transaction	As an Admin, I want to view and manage customer payments, so that I can track successful and failed transactions accurately.	This screen displays a list of transactions in a grid format. The grid displays transaction details such as the user name, transaction ID, registered mobile number, service name, transaction amount and transaction method. The grid should support pagination and sorting. The screen also includes a Filter option. When the admin clicks on the Filter button, a filter panel opens on the right side. This panel allows the admin to filter data based on Amount Range, and Payment Method. The admin can clear the selection using the Cancel button.	Admin	The payment amount should be highlighted with green color and also displayed with +. Ex:- +$20.0
HC-035	Payment & Transaction Management	Payment & Transaction -> Detail	As an Admin, I want to view transaction details for specific orders, so that I can perform audits and resolve payment-related issues.	When the admin clicks on the any row in the Payments & Transactions grid, the system should open the Payments & Transactions Details screen. This screen displays complete payment information for the selected transaction such as user name, mobile number, transaction ID, service name, service ID, payment amount, and transaction date and time. Below the main transaction details, display a section titled “Other Payment & Transaction,” which lists the customer’s related transactions in a grid format. This grid should display transaction ID, service name, amount, transaction method. Action column is having delete icon, on click of delete one confirmation box will open and if admin proceed then that payment detail will be removed from system.	Admin	The payment amount should be highlighted with green color and also displayed with +. Ex:- +$20.0
HC-036	Contact Us & Support Management	Support	As an admin user, I want to view all details submitted by customers on the Contact Us page so that I can understand their queries and respond	All details submitted by customers on the Contact Us page, such as ticket number, name, email, mobile number, description and submission date, should be displayed in a grid format. The grid should support pagination and sorting. Two filters, User Name and Submission Date, should be provided to filter records.	Admin	Data can not be changed. It is just for View purpose. If description is too long then we can display first 20 character with... and on hover of that description, display full description in tooltip.

HC-037	Dashboard & Analytics	Dashboard	As an admin user I want to view a centralized dashboard so that it provides a real-time overview of platform performance, including bookings, users, service partners, and revenue to quickly assess business health and trends.	The system should display summary cards at the top of the dashboard showing indicators. **Metrics Cards**: Total Services Booked, Active Users, Active Service Partners, Total Revenue Each card should display: Metric value, Percentage change compared to the previous week, Visual indicator for increase or decrease (e.g., green for growth, red for decline), Relevant icon representing the metric **Top Performing Services Section**: The system should display a Top Performing Services chart showing booking distribution across service types. Features: Donut or pie chart visualization Total bookings count displayed at the center List of service types with booking counts (e.g., Cleaning, AC Repair, Gardening, Salon Services) Time Filters: This Week, This Month, This Year Changing the filter should refresh the chart data accordingly. **Revenue Overview Section**: The system should display a Revenue Overview bar chart representing revenue trends over time. Features: Bar graph visualization X-axis: Days of the week Y-axis: Revenue amount Bars representing revenue per day Time Filters: This Week, This Month, This Year Selecting a time filter should update the chart dynamically. **Top Cities by Bookings Section**: The system should display a Top Cities by Bookings line chart. Details: Comparison of booking trends across top cities X-axis: Days Y-axis: Number of bookings Each city represented with a distinct line Time Filters: This Week, This Month, This Year Selecting a time filter should update the chart dynamically. **Top Service Partners Section**: The system should display a Top Service Partners list based on completed services. (List should be based on maximum completed services desc. to asc.) For each service partner, display: Profile image/avatar, Name, Service Type, Total completed services count A “View All” button should be available to navigate to the complete service partners list. (User Management -> Service Partner)	Admin
